

Decarbonise construction

We're developing low carbon materials, improving recycling, increasing the energy and thermal performance of homes and finding practical ways to electrify heating, all helping to reduce the environmental impact of buildings.

Increase diversity

We're creating more open, supportive and inclusive cultures to welcome new and diverse talent. Providing training and development programmes, apprenticeship schemes, professional advancement pathways, all designed to ensure our people are equipped with the skillsets to shape a better future.

Smart solutions

We're an industry of the future, creating high tech solutions, smarter products, for smarter homes and cities. Developing solutions to reduce water wastage, providing more renewable energy options and ways to manage whole life building performance better.

Accelerate innovation

We're developing innovations that are changing the way things get built, supporting modern methods of construction and leveraging digital technology to optimise the way things get done and how we work.

Building safety

We're actively contributing to improving building safety, helping to promote high quality, compliant materials, as well as prioritising well-being in the workplace, providing training to help everyone stay safe.

BUILDING MATERIALS CAREERS

Make a material difference

Shaping a better tomorrow

Imagine being part of that

The Building Materials sector is a hub of connectivity, collaboration and innovation.

We're on a mission to modernise, digitise, decarbonise and diversify – and we need YOUR help!

We all want to build a better tomorrow: safer, greener, more sustainable. If you want to be part of that, we want you!
